Tyler, TX 75707

To whom it may concern,

Fitzpatrick Architects was our design partner for a renovation of our 40 year old customer and technology center. The team at Fitzpatrick Architects spent the time to understand the needs for this facility as well as our company culture. In doing so the design that was developed embodies our vision of boldly challenging what's possible. Along the way the Fitzpatrick team with our internal project manager and construction partner ensured the project stayed on track to cost commitments while upholding the proposed design.

The response to our renovation has been overwhelmingly favorable by our customers and the local community. The building is now very welcoming and inviting for anyone visiting the facility or just driving by. Recurring themes within the feedback are ground breaking, innovative and inspiring.
